### **DETAILED ACTION**

#### Response to Amendment

The pending claims are 44-52,56-87.

The drawing objections have been withdrawn in view of the substitute drawings filed 09/14/05.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 44-52,56-57,59-75,77,79-87 are rejected under 35 U.S.C. 102(e) as being anticipated by Samson et al. ( USPN 6,143,013).

Samson et al. disclose a catheter comprising an inner tubular liner having a relatively stiff proximal section comprising a metallic and non-metallic stiffer coaxially wound about the inner tubular liner and a relatively flexible section comprising non-metallic stiffener coaxially wound the metallic stiffener terminating before reaching the distal section of the catheter. See figures 1-6 and especially figure 8. See abstract, see columns 7-8 (specifically col. 8 lines 4-20,30-33,55-59), col. 9, lines 5-15, 64-67, col. 12,

lines 11-16, 29-62, col. 13-15. With respect to the limitation of the distal section being free of a metallic stiffener, Applicant is directed to the drawing of figure 8.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 58,78 are rejected under 35 U.S.C. 103(a) as being unpatentable over Samson et al. ( USPN 6,143,013).

Samson et al. disclose the claimed invention except for the material of the non-metallic stiffer comprising a liquid crystal polymer. Samson et al. disclose a variety of materials such as polyaramids and carbon fibers for the ribbon/braid. Samson et al. also disclose a plurality of polymeric materials for the tubular structure. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the materials of the non-metallic stiffener for materials which provide different properties, cost, or quality applicable for the catheter, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended uses as a matter of obvious engineering choice lacking any criticality. In re Leshin, 125 USPQ 416.

Claim 76 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments filed 09/14/05 have been fully considered but they are not persuasive.

Samson et al discloses using braids on metallic materials such as nitinol and non-metallic braids constructed of polymeric fibers or carbon fibers. See column 8, lines 55-59. Specifically, Samson et al. discloses the braid may be partially constructed of polymeric or carbon fibers replacing or in conjunction with a ribbon in the braid.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LoAn H. Thanh whose telephone number is (571) 272-4966. The examiner can normally be reached on Mon. - Fri. (First Friday off).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nick Lucchesi can be reached on (571) 272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
